Dear Milt,

I would like to take this opportunity to recommend BY INVITATION ONLY to all BPCS Security Officers. Anyone using this product will save a considerable amount of time maintaining their users' security profiles.

One big advantage for us has been the fact that BY INVITATION ONLY not only copies a user's access to standard BPCS menus, but to all the menus created by Cytec. When using standard BPCS to create a new user, we have to figure out what Cytec menus are involved. Now, that step can be skipped because BIO automatically includes Cytec menus when copying one person's access to create another person's.

Auditing the user's access is easier, too. We frequently receive requests to know who has access to a given program or menu. In seconds, BIO outputs an easy to follow report with that information. It will also create a report detailing an individual's entire security profile.

Granting many people access to a given program is quicker, too. We no longer have to do this person by person, but can accomplish this by looking at the access from the point of view of the program. It becomes easy to see who does not have access, and then grant them access.

Briefly, BY INVITATION ONLY can save your BPCS Security Officer's time every day, and on those days when an auditor or special request for information turns up. It is well worth your time to examine this product. It is truly a useful tool for BPCS installations.

Sincerely,

Mark Knorr /upi
